2-Stroke Engine ~ Chainsaw

Many gas-powered tools are used in landscaping. Some need a special blend of gas and oil. (2-stroke engine, 4-stroke engine)

The mix ratios of gas and oil may be different for each machine. You will need to read the equipment manual to find the proper measurements for each.

Using the wrong mix ratio can seriously damage the equipment.

The ratio for this chainsaw is
50:1 (50 parts gas to 1 part oil)

Sample:

Mix Ratio 50:1	
 Gasoline	 Oil
Litre	Millilitre
5L	100ml
10L	200ml
15L	300ml
20L	400ml
